INTRODUCTION

Gyre is a crypto token, a completely peer-to-peer form of digital asset that allows online payments to be transmitted straight between parties without depending on any central server. Hence, it is built on the native token standard of Binance Smart Chain, BEP-20. The tokens are minted using the Proof of Stake consensus algorithm.

The designated ticker symbol for the Gyre token is **GYR**. It has commenced in the market with a total supply of 10 billion tokens. This open-source model is available to individuals, organisations, corporations, non-profit entities, and blockchain associations. We have entailed numerous token utilities and are perpetually working on creating more use cases to make digitalisation accessible to everyone.

UNDERLINE TECHNOLOGY

As Gyre tokens are built on the **BEP-20**, here is some information about its underlying technology. BEP stands for **Binance Smart Chain** Evolution Proposal. Binance has developed its smart chain with various token standards, such as **BEP2, BEP-20, BEP-721, BEP-1155**, and many more.

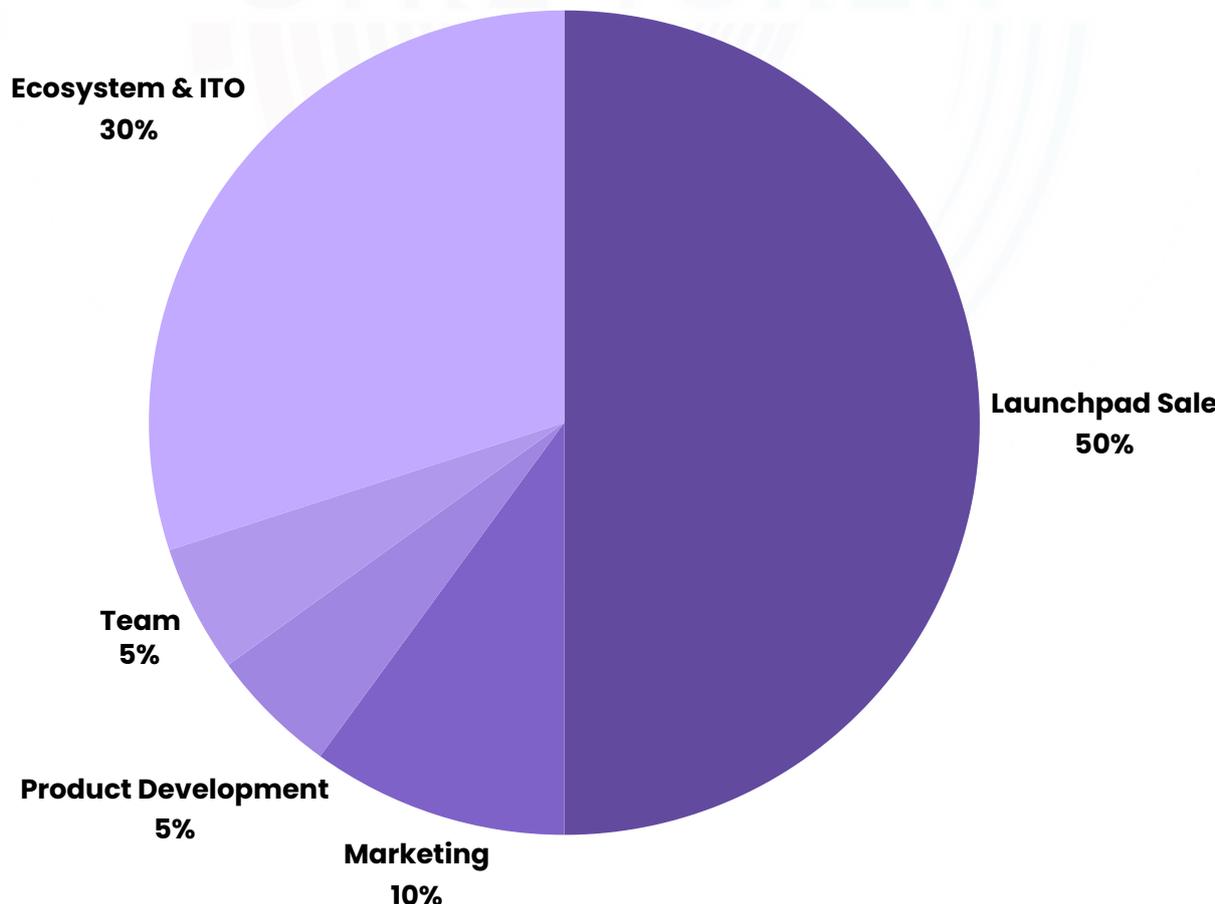

The Gyre token is minted on one of the notable Binance token standards, BEP-20. The BEP-20-based tokens are digital assets that do not own any blockchain. Instead, they are completely developed on prominent blockchain technology like Ethereum or Binance Smart Chain (BSC). The **BSC technology** ensures BEP-20 built tokens remain compatible with other technologies. Also, these tokens can be smoothly traded on DEXs (decentralised exchanges) and platforms supporting the Binance Smart Chain.

To be concise, the BEP-20 tokens work similarly to the ERC-20 standard of **Ethereum blockchain technology**. The parameters like inflationary minting, deflationary burning mechanism, pause parameter in uncertain circumstances, and less costly attributes of the BEP-20 standard make it a better choice.

TOKENOMICS

| | |
|-----------------------------------|--|
| TOKEN NAME | GYRE TOKEN |
| TOKEN SYMBOL | GYR |
| TECHNOLOGY USED | BEP-20 of Binance Smart Chain |
| TOTAL SUPPLY | 10,000,000,000 (10 billion) |
| GYRE'S INITIAL TOKEN LAUNCH PRICE | 0.024USDT |
| DECIMALS | 18 |
| TRANSACTION PER SECOND (TPS) | 115 |
| TOKEN BURNING RATE | 95% of the Total Supply |
| SMART CONTRACT ADDRESS | 0x594b615101cCAa2De48Dfb0A5b4b4a58358f4c59 |

ALLOCATION

TOKEN TRACKING AND TRADING PLATFORMS

- **Tracking Platforms**

To track and sync the live performance of the Gyre token, users can fetch it on the following tracking platforms:

• Trading Platforms

The Team is in the process of listing it on more cryptocurrency trading platforms and exchanges. Right now users can find Gyre on:

HOW DOES GYRE TOKEN WORK?

Gyre tokens leverage the power of Binance Smart Chain (BSC) technology through the BEP-20 standard. BEP-20 stands for Binance Evolution Proposal

Here's what BEP-20 offers Gyre tokens and their users:

- **Built on a Proven Blockchain:** BEP-20 tokens, like Gyre, don't require their own blockchain. Instead, they leverage the strong security and functionality of BSC, a leading blockchain platform.
- **Seamless Trading:** BEP-20 compatibility ensures Gyre tokens can be traded smoothly on decentralized exchanges (DEXs) and platforms built for the Binance Smart Chain ecosystem.
- **Enhanced Efficiency:** BEP-20 offers features like controlled token supply (through minting and burning mechanisms) and the ability to pause trading in unforeseen circumstances. These features give Gyre developers more control and flexibility.
- **Cost-Effectiveness:** Transactions involving BEP-20 tokens are generally known for their lower fees compared to other standards, making Gyre token transfers more affordable.

In essence, BEP-20 provides Gyre tokens with a secure, efficient, and cost-effective foundation for operating within the thriving Binance Smart Chain ecosystem.

WAYS TO EARN WITH GYRE

Gyre App and Ecosystem- Designed for ITO (Initial Token Offering)

This is to inform all the readers that the **Gyre Token** was initially built with an utter focus on investing, trading, and staking purposes. Considering its embryonic aim, it launched in the market as a **community token** in quarter 4 of 2022. We have introduced an entire Gyre ecosystem with several reward-making options via its application likewise-

1. On holding Gyre tokens in wallets, users could get rewards on their staking
2. By growing their connections and building digital, users received rewards

The catalogue above doesn't end here, we have entailed many other income-generating options on the app for the token airdrop.

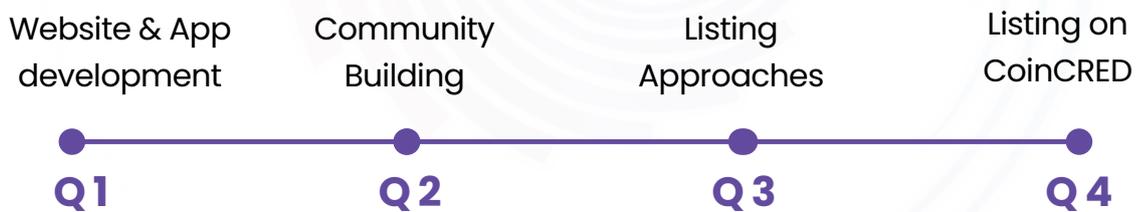

ROADMAP

This roadmap provides a general overview of the planned milestones and timeline for the Gyre Token.

2022

2023

2024

PROJECT OWNER

- **Project Owner & Head: Ubaid Chand**

The project owner and head, **Ubaid Chand**, has over seven years of experience in the blockchain space. He has played a vital role in developing many startups from scratch. Also, he has been an angel investor in digital assets for many years.

Mr. Ubaid Chand is also a serial entrepreneur passionate about new-age technologies like **blockchain, data science, artificial intelligence**, and more. Following his interest, he currently leads multiple high-tech projects, including crypto assets, exchanges, metaverse platforms, and more. He entered the industry and moved ahead with a vision to bring change with digital currency.

- **Note**

All the users are being introduced to **Mohammed Rafiuddin Khan**, one of the former project owners. He played a crucial role in the creativity and development of the project with **Mr. Chand**. He is passionate about revolutionising technologies and believes in adopting the changes.

Although the Gyre token project is now solely directed and led by Ubaid Chand, we appreciate the contribution given by Mr. Rafiuddin. He led and managed the project until the second quarter of 2022, along with Ubaid Chand.
